Clinical AI Report

Report ID: MIQ-20260417-143813-5EEEE4

Generated: 2026-04-17 14:38:15

DIAGNOSIS	PNEUMONIA PROB	NORMAL PROB	CONFIDENCE	ROUTING
Pneumonia	87.0%	13.0%	87.0%	Senior Radiologist Review

1. Clinical Summary

The chest X-ray analysis suggests pneumonia with a high probability of 87.0%, indicating a significant likelihood of lung infection.

2. Findings

The Grad-CAM activation heatmap reveals a dominant activation quadrant in the bottom right, with a peak activation location at 42.4% from the top and 66.1% from the left, primarily involving the lower lung fields.

3. Heatmap Interpretation

The heatmap shows a high activation area of 45.6% of the image, with a mean activation intensity of 0.538, suggesting a substantial area of lung involvement, particularly in the lower lung fields.

4. Routing Recommendation

Based on the system's routing recommendation, this case is referred to a Senior Radiologist for review to confirm the diagnosis and guide further management.
